

Annual Trail Report

Last fall on the Bamforth Ridge Trail, drainages and blowdowns were cleared. The new reroute at the bottom of the trail was benched and opened. Lumber was carried to the shelter for tent platforms. On a later date the tent platform rebuild that was started in the summer was completed. There is still a single platform to rebuild. The reroute at the bottom of the trail still needs considerable work to harden the trail from mud. Much work also remains to dry out the trail just prior to the shelter.

In Smugglers' Notch, with a small crew, stones were added to the steps we built several years ago, and work was accomplished to dry out a particularly wet section of trail on the lower Barnes Loop.

The scheduled work hikes have been cancelled due to the Virus protocol of Stay at Home.
